

911-HM

HINGED MAST

Applications

- WEATHER STATIONS

Features

- FRANGIBLE
- EASY TO LOWER
- EASY INSTALLATION
- STABLE
- 10 METRES HIGH

Description

The 911-HM HINGED MAST is intended for deployment at accessible sites, where delivery inside a 40ft shipping container is cost effective.

It is also low in cost, both to install and purchase.

The mast is fabricated from steel sheet and is galvanised. The required cables and equipment shelter are fitted to the mast in the factory.

Erection is simple by embedding a ragbolt assembly in the ground, in the concrete foundations. Finally the mast is lifted into place by a crane and bolted down.

The crossarm and sensors are bolted in place and sensors connected to the factory fitted cables.
